

Name:- Ganesh Malaji Ghule

Roll No.:- 37

Div:- A

Title:- Develop an elementary chatbot for any suitable customer interaction application

Program :- Chatbot

Program

```
def greet(bot_name, birth_year):    print("Hello! My  
name is {0}.".format(bot_name))    print("I was  
created in {0}.".format(birth_year))
```

```
def remind_name():    print('Please,  
remind me your name.')    name =  
input()  
    print("What a great name you have, {0}!".format(name))
```

```
def guess_age():    print('Let me  
guess your age.')  
    print('Enter remainders of dividing your age by 3, 5 and 7.')
```

```
    rem3 = int(input())    rem5 = int(input())    rem7  
= int(input())    age = (rem3 * 70 + rem5 * 21 +  
rem7 * 15) % 105
```

```
    print("Your age is {0}; that's a good time to start  
programming!".format(age))
```

```
def count():    print('Now I will prove to you that I can count to any  
number you want.')
```

```
    num = int(input())
```

```
    counter = 0    while  
counter <= num:  
    print("{0} !".format(counter))  
counter += 1
```

```
def test():  
    print("Let's test your programming knowledge.")  
print("Why do we use methods?")  
    print("1. To repeat a statement multiple times.")    print("2. To  
decompose a program into several small subroutines.")    print("3. To  
determine the execution time of a program.")    print("4. To interrupt  
the execution of a program.")
```

```
    answer = 2    guess =  
int(input())    while guess !=  
answer:        print("Please, try  
again.")  
        guess = int(input())
```

```
    print('Completed, have a nice day!')  
    print('.....')  
print('.....')    print('.....')
```

```
def end():    print('Congratulations, have a  
nice day!')  
    print('.....')  
print('.....')  
print('.....')    input()
```

```
greet('TE-Chatbot', '2022') # change it as you need
remind_name() guess_age() count()
test()
end()
```

The screenshot shows a Jupyter Notebook interface in a web browser. The browser's address bar shows the URL: `localhost:8888/notebooks/Untitled10.ipynb?kernel_name=python3`. The Jupyter Notebook title bar says "jupyter Untitled10 Last Checkpoint: 2 minutes ago (autosaved)". The notebook contains a code cell with the following Python code:

```
print('.....')
print('.....')
input()

greet('TE-Chatbot', '2022') # change it as you need
remind_name()
guess_age()
count()
test()
end()
```

Below the code cell, the output of the program is displayed. It shows a series of prompts and responses from a chatbot named "TE-Chatbot". The chatbot introduces itself, asks for the user's name (receiving "Tejas"), asks for the user's age (receiving "21"), and then asks for the user's programming knowledge. The chatbot's responses are as follows:

```
Hello! My name is TE-Chatbot.
I was created in 2022.
Please, remind me your name.
Tejas
What a great name you have, Tejas!
Let me guess your age.
Enter remainders of dividing your age by 3, 5 and 7.
21
3
5
Your age is 33; that's a good time to start programming!
Now I will prove to you that I can count to any number you want.
2
0 !
1 !
2 !
Let's test your programming knowledge.
Why do we use methods?
1. To repeat a statement multiple times.
2. To decompose a program into several small subroutines.
3. To determine the execution time of a program.
4. To interrupt the execution of a program.
```

The output ends with a text input field for the user to provide an answer.
